

ATTENTION RESIDENTS

During the last several months we have received reports of water leaks in some bathrooms from the base of the shower handle. These leaks cause damage to the bathroom wall and if prolonged or severe enough, they may result in water damage to the suite below.

If your bathroom has a configuration of the shower handle as on the picture below, the upper section of the shower handle flange has to be sealed to prevent water leakage.

The flange of the shower handle overlaps the raised border tiles

If you need any clarification, please contact Building Manager at 604-202-2868.
